

YOUR NEW ZEALAND MANUFACTURED ORGANIC SOLUTION  
TO A CLEAN GREEN ENVIRONMENT

 **Bio-Zyme** is a **high performance**, non-toxic, non-allergenic and **readily biodegradable** multiple enzyme degreaser, odour controller, **cleaner/sanitiser** (see MPI Approvals). **Environmentally & waste water treatment systems preferable.** **Effective against bacteria & Corona Virus.**

## Cleaning Boats

### Reason for using Environmentally preferable products

-  Regional Councils are actively testing water qualities in the Marina and Harbour and will be drafting new water quality guidelines for those areas in the near future.
-  The Marinas are committed to protecting our water ways and have invested a lot of time sourcing a product that is environmentally preferable with a low impact on the environment. Bio-Zyme is considered **best practise for Marinas and water ways.**

### Solution

-  Using approved Bio-Zyme Cleaner at dilution rate 60mls/Ltr of water for the following:
  - Wash down exterior of boats
  - Wash down canvas & clears
  - Wash out fish bins
  - Inside general cleaning all areas
  - Upholstery / Carpets

## Marine | BoatWash

Where & How to use our Products

## Cleaning Toilets on Boats

### Problem

-  One of the biggest problems facing this industry is the use of strong chemicals that are toxic to disinfect and mask the waste water effluent odours, rather than help to decompose naturally.

### Solution

-  Small additions of Bio-Zyme into the grey water will help degrade and deodorise the waste for acceptable disposal to sewer
-  For marine toilets add 100 mls of Bio-Zyme Industrial per 100 Ltr capacity to initial water charge. This will last 2 weeks. Do not use any other chemicals
-  Bio-Zyme enhances & conditions contents of waste water tank.
