

The last month has been an exciting one for us, we have bought on a new range of biodegradable and compostable Bagasse and Potatopak cups/plates/trays and cutlery as well as BioBags - compostable rubbish bags.

Potatopak plates and food trays are made from potato starch! The potatoes are washed with water at 120kph, they are then pushed through a tube fitted with knives and are cut into chips/wedges etc. The water which is now full of starch is processed through a starch extractor. Once filtered this leaves starch and clean re-usable water!

Potato plates take on average 4 weeks to fully decompose in a compost bin.

I will be gradually adding these products to our website so if you can't find what you are looking for ask me and I'll load the products for you.

August Product Special

To welcome the Potatopak products on board this month's special is on the Oval Plates medium natural. Replace your plastic and paper plates at your next function with this compostable option.

Carton of 9 packs of 25 plates (225) ~~\$99.79~~ - this month only \$91.00+ GST

Interesting fact!

The first product to use a bar code was Wrigleys gum.

Thank you for your business, we truly appreciate it.
